

AI BOTS

- Narrow Artificial Intelligence
- Transaction Intelligence & Process Automation
- LUIS, Cortana and Alexa Voice & Text apps
- AI Bots development using LUIS (Language Understanding Intelligence Service)

Intelligent Apps
Specialist

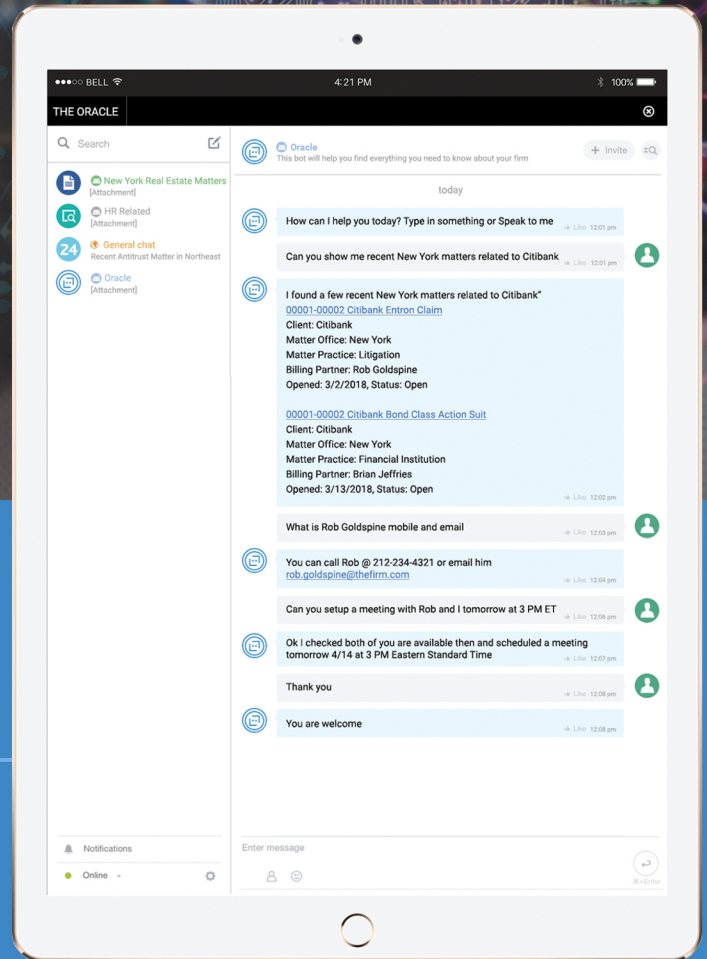

Low Cost,
Instant ROI

Rapid
Development

Easy to Use,
Tablet Ready

AI BOT : KLST develops powerful AI bots that users can easily interact with using Natural Language to get answers to questions. KLST AI team develops Bots using LUIS (Language Understanding Intelligence Service), Azure Bot Service (powered by Microsoft Bot Framework), .NET/NodeJS and REST endpoint integration with SharePoint, Salesforce, SAP and other enterprise software.

An End-To-End Overview of Your AI-BOT Project :

- ✔ KLST specializes in developing Transaction Intelligence & Process Automation apps, Voice Intelligence apps and Narrow AI Bots using LUIS (Language Understanding Intelligence Service), Azure Bot Service, .NET, NodeJS and REST APIs.
- ✔ KLST develops intelligent apps with a primary focus on Software QA & Testing Practices & Processes especially designed for test driven development of intelligent automation apps, voice apps and chatbots
- ✔ KLST has built a global talent pool of resources who specialize in Azure Bot Framework, Azure Analysis Services, Azure Data Factory, Azure HDInsight, Power BI, LUIS, Cortana, Alexa etc.

Intelligent Apps Specialist

- ✓ User facing Chatbots that can include single chatbot interactions or a group of chatbots working at the backend to handle different user queries and requests.
- ✓ Smart Analytics built on data mining and pattern recognition platforms that process large amounts of firm data to produce insights, provide personalization, predict events and make recommendations
- ✓ Bot Integrations with AI & machine learning capabilities that integrate with your Firm's business applications

KLST works with both LUIS (Language Understanding Intelligence Service), Microsoft Cortana and Amazon Alexa to process speech-to-text and text-to-speech interactions between humans and machines, especially to develop voice based assistants delivered across intranet, extranet, internet websites and mobile apps. Transaction Intelligence & Process Automation – KLST develops intelligent agents and bots to discover patterns, use machine learning to process big data and learn from past events to recommend approach, predict risks, automate tasks and assist with making key business decisions.
